

Pressure Range: 33 to 1013 mbar
Suction Volume: 130 to 560 m³/h

CONSTRUCTION

SIHI liquid ring vacuum pumps have a simple but robust construction with the following features and benefits:

- Near isothermal compression
- Oil free, with no internal lubrication
- Capable of handling almost all gases and vapours
- Able to handle quantities of liquid "carry over"
- Low maintenance and safe operation
- Low noise and almost vibration free
- Available in a wide range of materials
- Broad range of applications
- O-ring sealing as standard
- Cavitation protection as standard
- Drain hole as standard
- Built-in solids drain
- Rotating metallic parts are non contacting to minimise wear
- ATEX compliance

SIHI liquid ring vacuum pumps of the range LPH 55312, LPH 55316 and LPH 55320 are two stage pumps.

APPLICATIONS

Evacuation and pumping of dry gases and saturated vapours. The pumps can also handle liquids. These units offer pressures in the range of 33...900 mbar(a) to atmospheric. Much lower pressures are available by using ancillaries such as ejectors and lobular boosting pumps. Typical application areas include:

- Chemical and pharmaceutical industry for distillation, drying and degassing
- Food and beverage industry for low temperature cooking, and bottle filling
- Electronic industry for impregnation and drying
- Plastics & Rubber industry for degassing
- Healthcare for sterilisers and general vacuum

Note

By continuously feeding the pump with a small amount of service liquid (usually water), the heat due to gas/vapour compression is conducted away. This also replenishes the liquid ring and ensures that it does not become saturated with process media. Recharging the pump with service liquid at ambient temperature enables the unit to condense evacuated gases / vapours. It can therefore be used for solvent recovery. The condensed gas and liquid can be separated in a liquid separator. More information is provided in the accessory catalogues.

The integrated solids drain permits the removal of any entrained solids whilst the pump is operating. The service liquid can therefore, simply be re-circulated. The rotation of the pump is clockwise when viewed from the drive end.

GENERAL TECHNICAL DATA

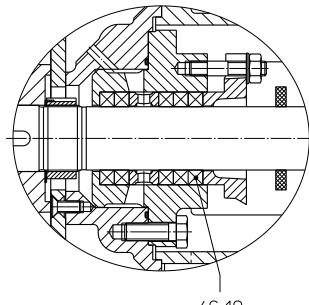

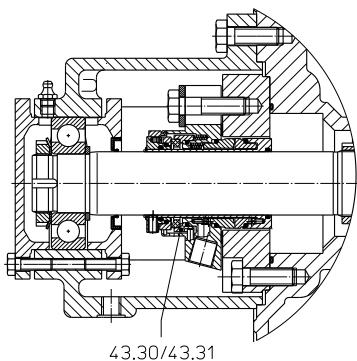

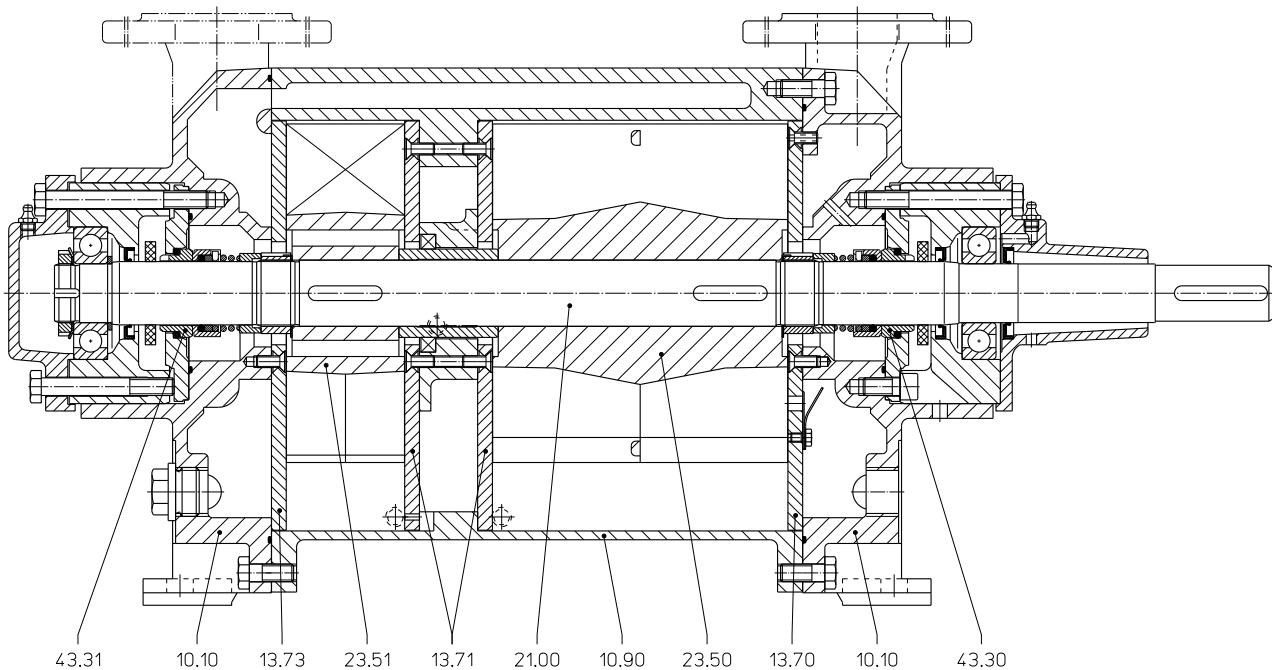

Pump Type	Units	LPH 55312	LPH 55316	LPH 55320
Speed	50 Hz 60 Hz	rpm	1450 1740	
Maximum overpressure on compression	bar		1.8	
Permissible pressure difference between suction and discharge side	max. min.	bar	2.0 0.2	
Hydraulic test pressure (overpressure)	bar		3.0	
Moment of inertia of rotating parts of pump and water content	kg · m ²	0.137	0.162	0.205
Noise level at 80 mbar suction pressure [50Hz]	dB (A)	66	67	68
Minimum permissible pulley diameter for V belt drive	mm	200	200	not allowed
Maximum gas temperature: dry saturated	°C °C		200 100	
Service liquid: Maximum permissible temperature Minimum permissible temperature Maximum viscosity Maximum density Liquid capacity up to middle of shaft	°C °C mm ² /s kg/m ³ litre		80 10 90 1200 10.0	12.0
Maximum flow resistance of the heat exchanger	bar		0.2	

In selecting a pump, avoid choosing one which is likely to be operating at a combination of its maximum permissible limits e.g. maximum viscosity and maximum permissible pressure difference.

All information in this catalogue, like general technical data, performance data, dimensions, arrangement drawings, accessories, etc. don't refer to the magnetic coupling execution.
Please contact the manufacturer about more information.

Performance Characteristics LPHX 55312

The operating data is valid under the following conditions:

- Process media:

- dry air:	20°C	_____
- steam saturated air:	20°C	-----
- Service liquid:

- water:	15°C	
----------	------	--

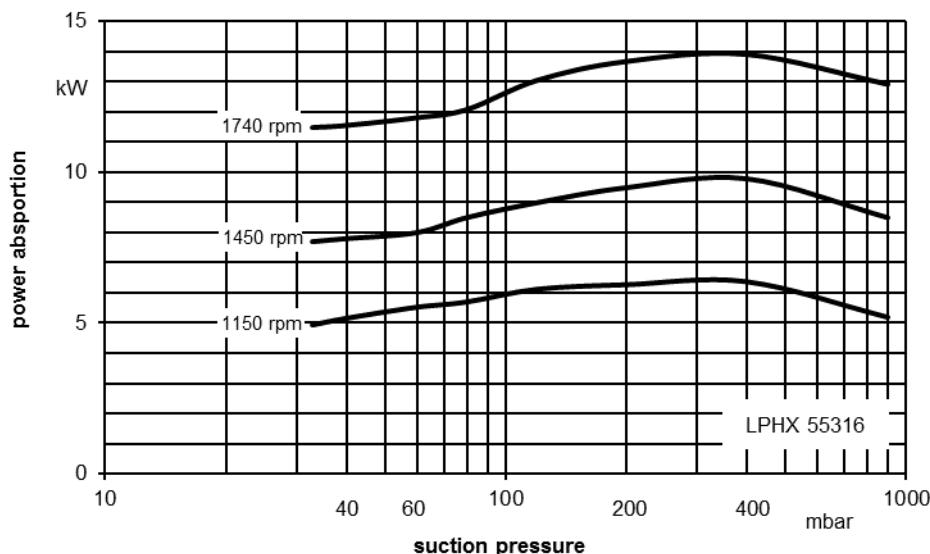

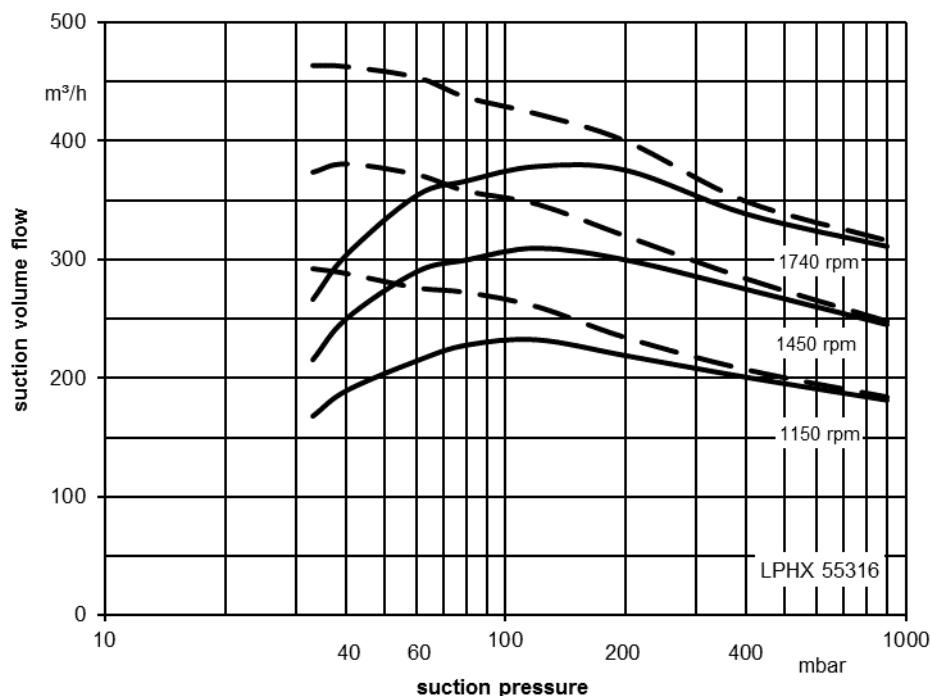

Pressure of gas to be evacuated: 1013 mbar (atmospheric pressure)

The suction volume is related to the suction pressure.

Tolerance on operating data is 10%.

The maximum consumption of make up water occurs at the lowest suction pressure.

Performance Characteristics LPHX 55316

The operating data is valid under the following conditions:

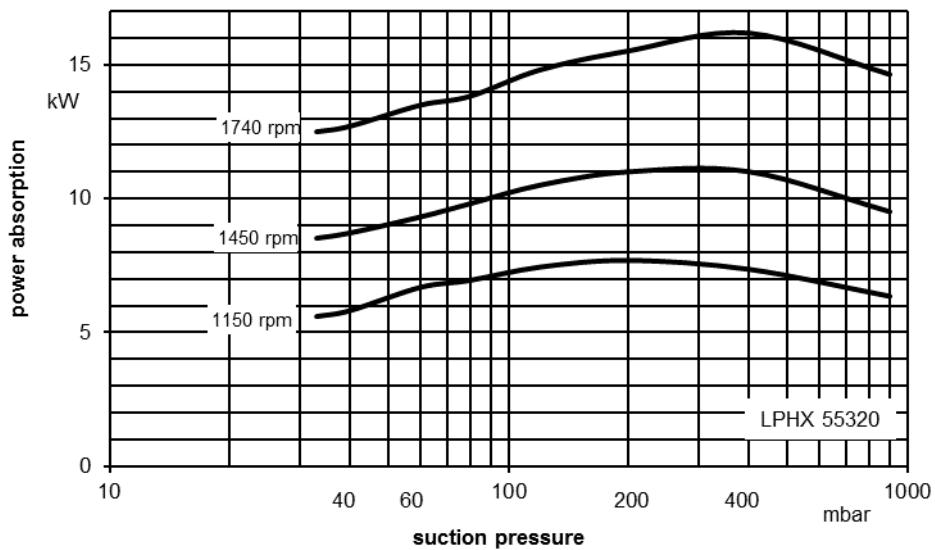

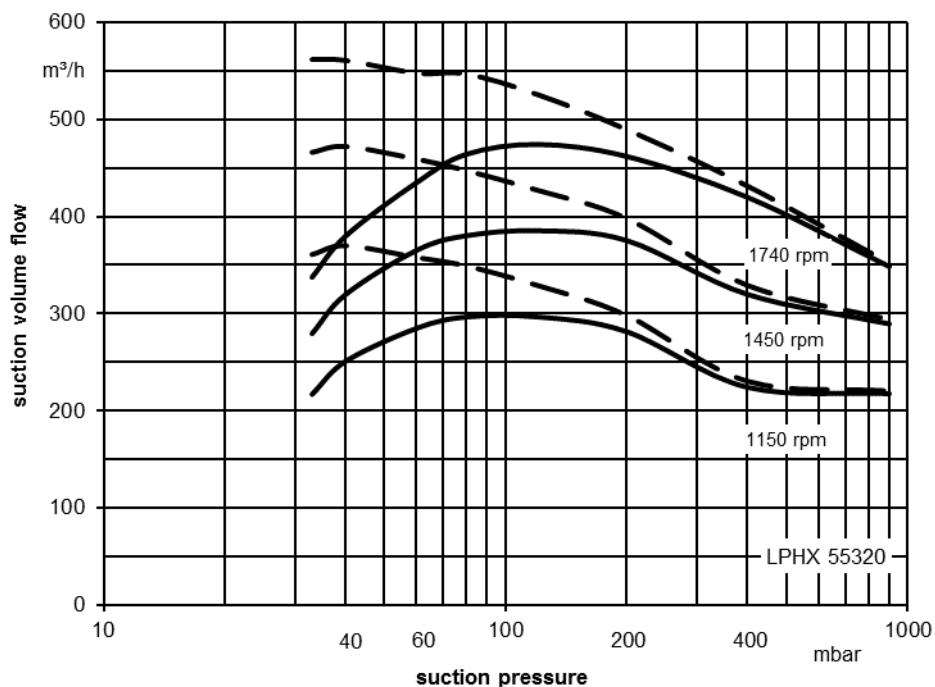

- Process media:
 - dry air: 20°C
 - steam saturated air: 20°C
 - Service liquid:
 - water: 15°C

Pressure of gas to be evacuated: 1013 mbar (atmospheric pressure)

The suction volume is related to the suction pressure.

Tolerance on operating data is 10%.

Maximum consumption of make up water occurs at the lowest suction pressure.

Performance Characteristics LPHX 55320

The operating data is valid under the following conditions:

- Process media:
 - dry air: 20°C
 - steam saturated air: 20°C
- Service liquid:
 - water: 15°C

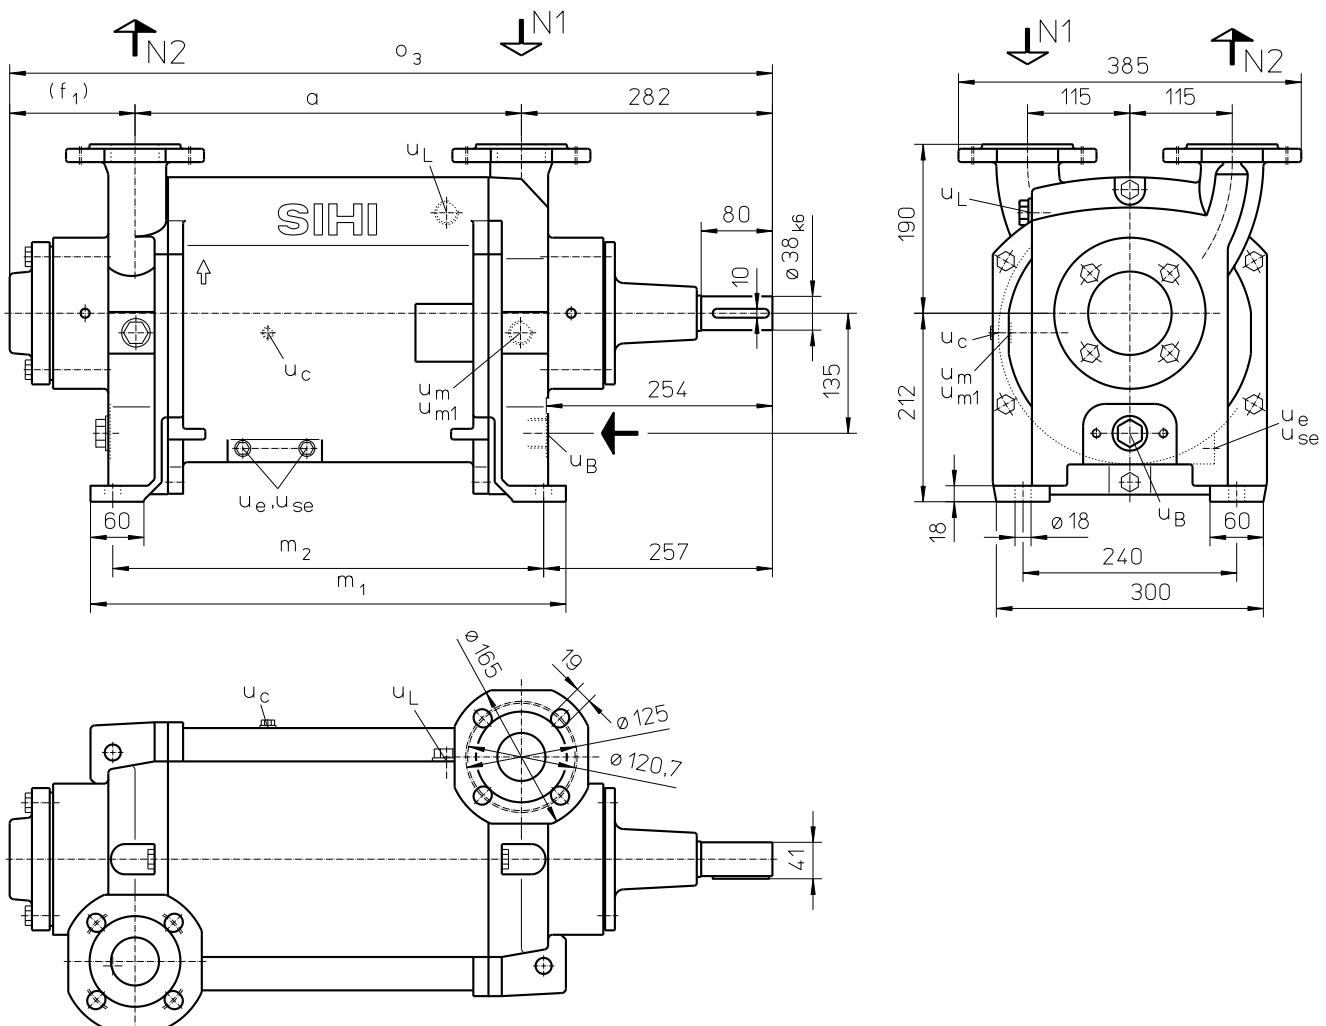

Pressure of gas to be evacuated: 1013 mbar (atmospheric pressure)

The suction volume is related to the suction pressure.

Tolerance on operating data is 10%.

Maximum consumption of make-up water occurs at the lowest suction pressure.
