

# Liquid ring vacuum pumps

in compact design

SIHI® Pumps

## LEM 91, LEM 126, LEM 161 LEL 91, LEL 126, LEL 161 with flange connection

**Pressure range:** 33 to 1013 mbar  
**Suction volume flow:** 24 to 195 m<sup>3</sup>/h

### CONSTRUCTION

SIHI liquid ring vacuum pumps are displacement pumps of uncomplicated and robust construction with the following particular features:

- non-polluting due to nearly isothermal compression
- oil-free, as no lubrication in the working chamber
- handling of nearly all gases and vapours
- small quantities of entrained liquid can be handled
- easy maintenance and reliable operation
- low noise and nearly free from vibration
- protection against cavitation as standard
- incorporated dirt drain
- incorporated central drain
- no metallic contact of the rotating parts

The SIHI liquid ring vacuum pumps LEM/LEL are single-stage ones.

### APPLICATION

Handling and exhausting of dry and humid gases; entrained liquid can be handled during normal duty. The pumps are applied in all fields where a pressure of 33 to 900 mbar must be created by robust vacuum pumps.

### GENERAL TECHNICAL DATA

Pump type	unit	LEM 91 LEL 91	LEM 126 LEL 126	LEM 161 LEL 161
Speed	50 Hz 60 Hz	rpm rpm	2900 3500	1450 1750
Maximum overpressure on compression	bar		LEM 0.3 / LEL 0.5	
Permissible pressure difference between suction and discharge side	max. min.	bar	LEM 1.1 / LEL 1.3 0.2	
Hydraulic test pressure (overpressure)	bar		3	
Moment of inertia of rotating parts of pump and water content	kg · m <sup>2</sup>	0.007	0.009	0.070
Noise level at 80 mbar suction pressure	dB (A)	72 (67)*		65
Maximum gas temperature	dry saturated	°C °C	200 100	
Service liquid				
Maximum permissible temperature			80	
Minimum permissible temperature			10	
Maximum viscosity			4	
Maximum density			1200	
Liquid capacity up to middle of shaft		mm <sup>2</sup> /s kg/m <sup>3</sup> litre	0.5	0.6
Maximum flow resistance of the heat exchanger	bar		0.2	2.0

The combination of several limiting values is not admissible.

\* value in parenthesis for measuring with sound insulation cup

### NOTE

During operation the pump must continuously be supplied with service liquid, normally water, in order to eliminate the heat resulting from the gas compression and to replenish the liquid ring, because part of the liquid is leaving the pump together with the gas. This liquid can be separated from the gas in a liquid separator (see catalogue part accessories).

It is possible to reuse the service liquid. The pumps are equipped with a device by which the contaminated service liquid can continuously be drained during operation (dirt drain), if necessary.

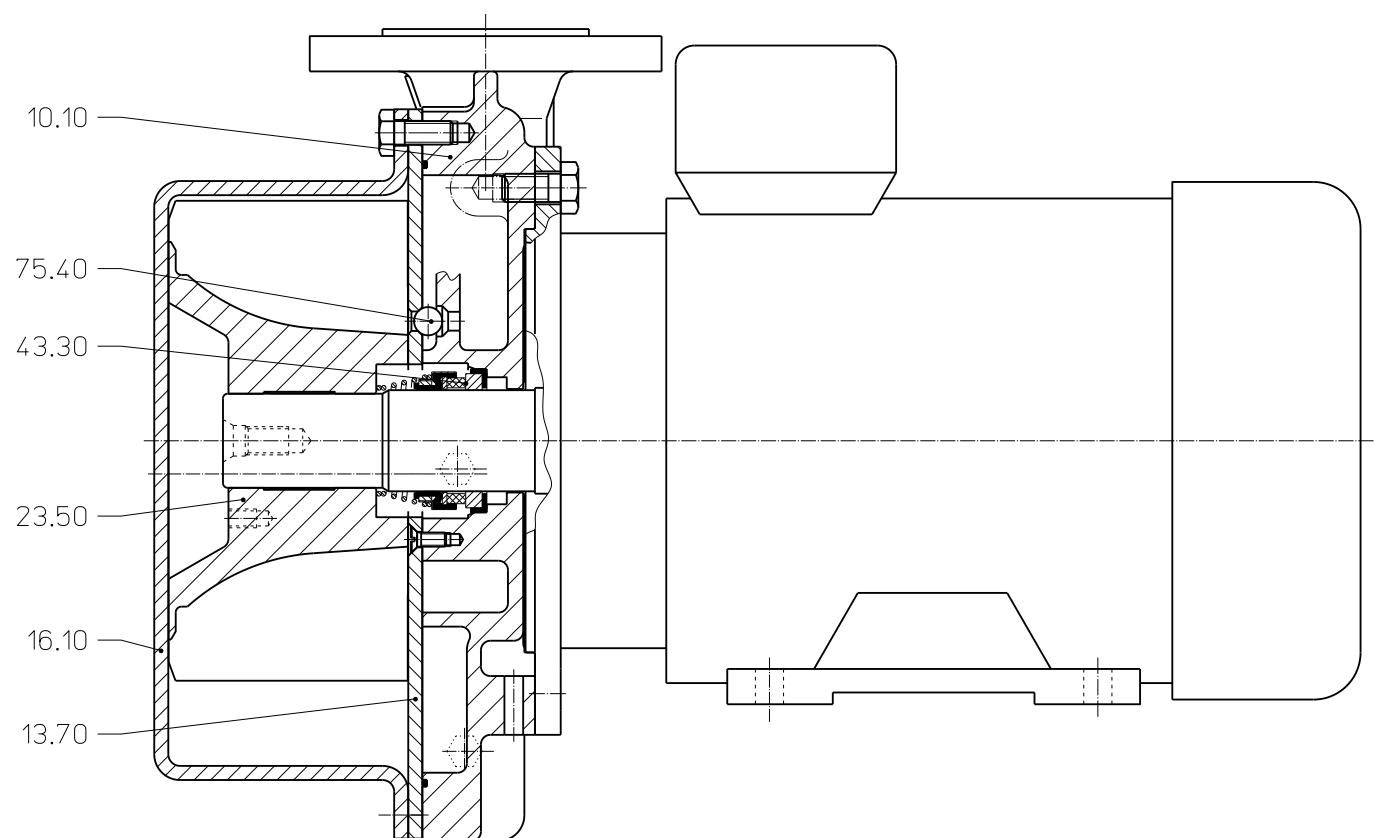

The direction of rotation is clockwise, when looking from the drive on the pump.

## Materials

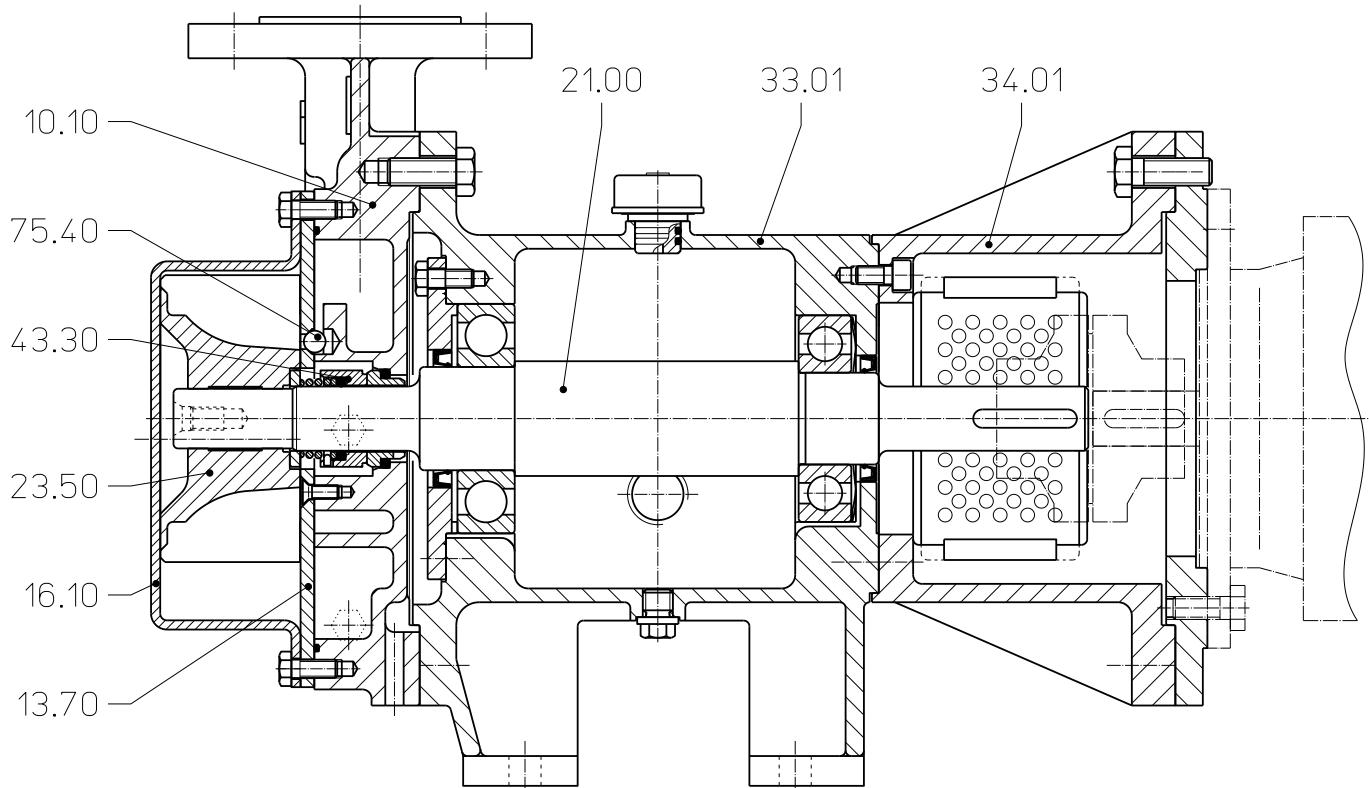

Item	COMPONENTS	MATERIALS OK
10.10	Vacuum casing	0.6025
13.70	Guide disc	
16.10	Cover	1.4301
21.00 *	Shaft	1.4571
23.50	Vane wheel impeller	1.4308
33.01 *	Bearing bracket	0.6025
34.01 *	Motor carrier	
43.30	Mechanical seal	Carbon / ceramic / Viton
75.40	Valve balls	Polyamide A

\* only for LEL 91, 126, 161

## Cut-away diagram LEM 91, 126, 161

**Cut-away diagram LEL 91, 126, 161**

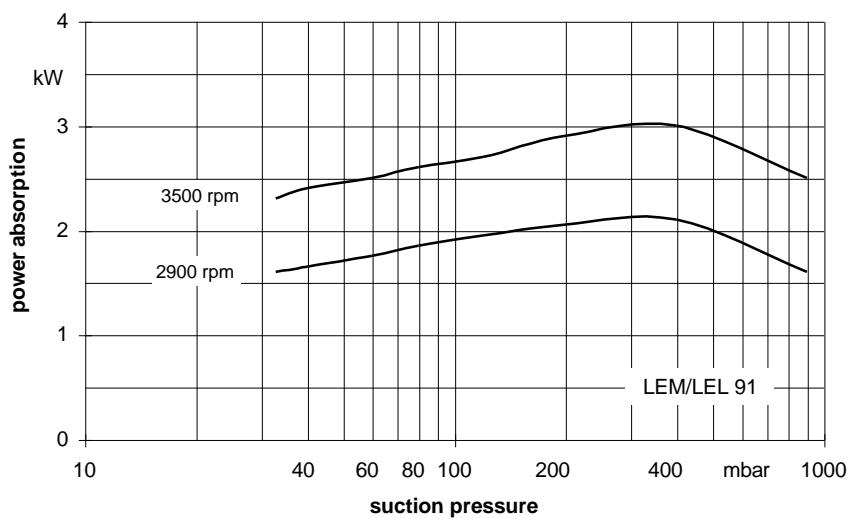

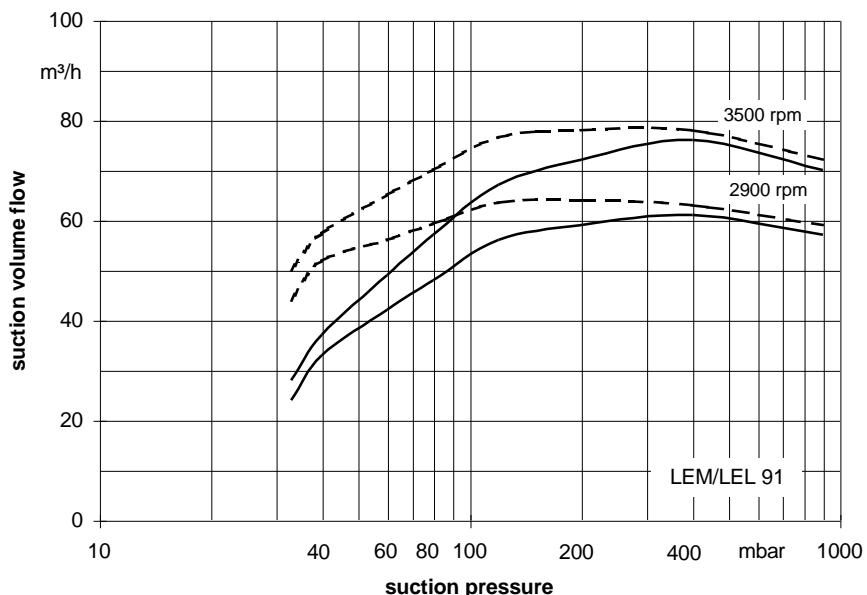

**Make-up Liquid Consumption** in [m<sup>3</sup>/h] dependent upon suction pressure, speed, drive type and temperature difference.

FB = Total service liquid flow rate on once-through system

KB = Flow of make-up water when combined with partial recirculation liquid at a temperature of 10 °C, 5 °C, 2 °C, warmer than make-up water

## Performance Characteristics LEM 91 / LEL 91

The operating data is valid under the following conditions:

- process media:
  - dry air:  $20^\circ\text{C}$
  - steam saturated air:  $20^\circ\text{C}$
- service liquid:  $15^\circ\text{C}$

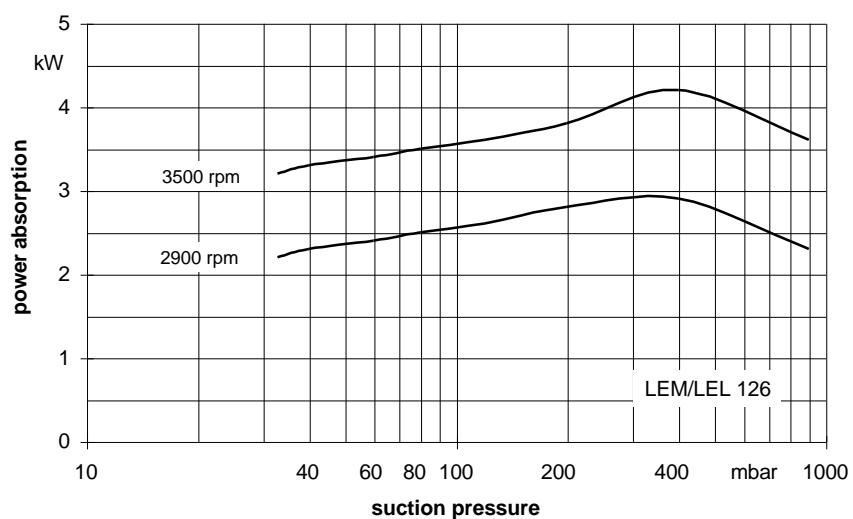

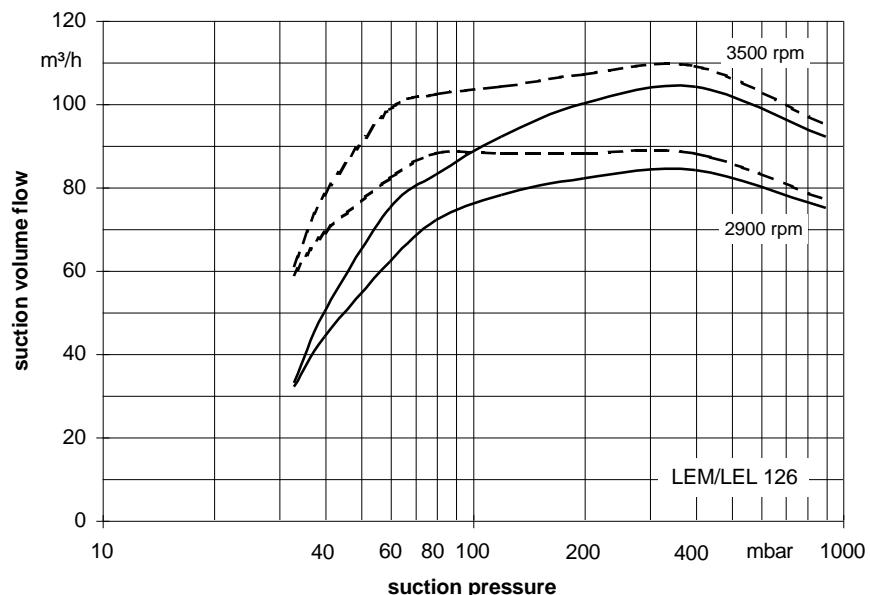

Pressure of gas to be evacuated: 1013 mbar (atmospheric pressure)

The suction volume is related to the suction pressure.

Tolerance on operating data is 10%.

The maximum consumption of make-up water occurs at the lowest suction pressure.

## Performance Characteristics LEM 126 / LEL 126

The operating data is valid under the following conditions:

- process media:
 

- dry air:	20°C	_____
- steam saturated air:	20°C	-----
- service liquid:
 

- water:	15°C	
----------	------	--

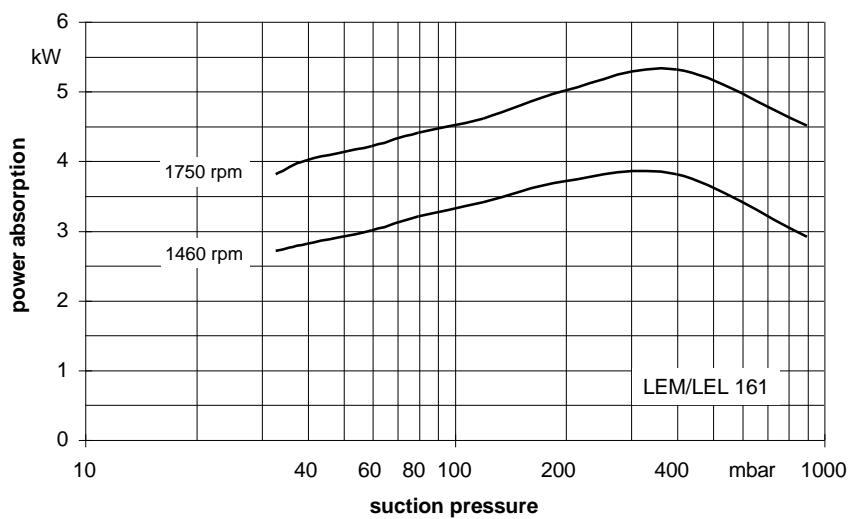

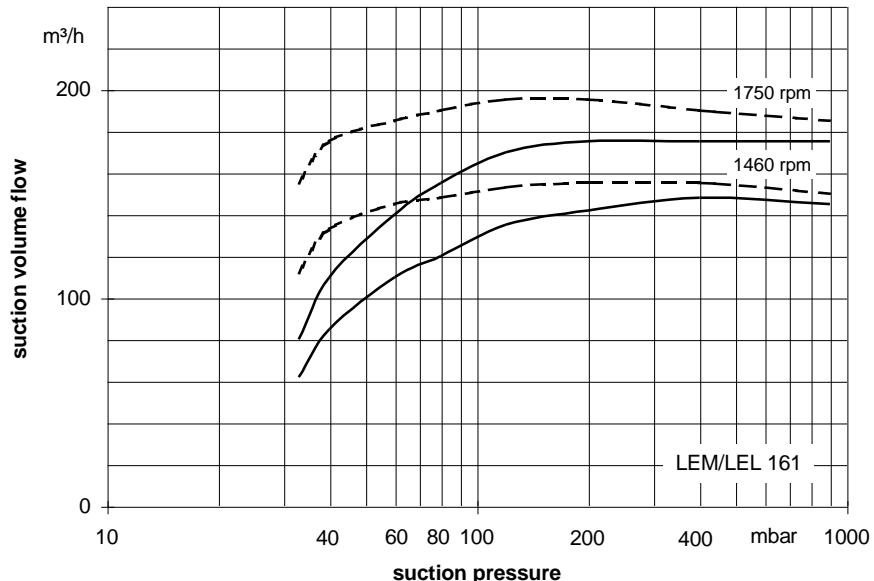

Pressure of gas to be evacuated: 1013 mbar (atmospheric pressure)

The suction volume is related to the suction pressure.

Tolerance on operating data is 10%.

The maximum consumption of make-up water occurs at the lowest suction pressure.

## Performance Characteristics LEM 161 / LEL 161

The operating data is valid under the following conditions:

- process media:
  - dry air:  $20^\circ\text{C}$
  - steam saturated air:  $20^\circ\text{C}$
- service liquid:
  - water:  $15^\circ\text{C}$

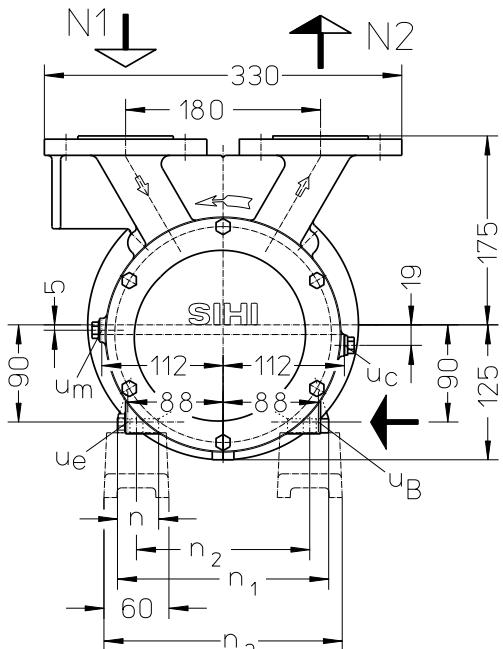

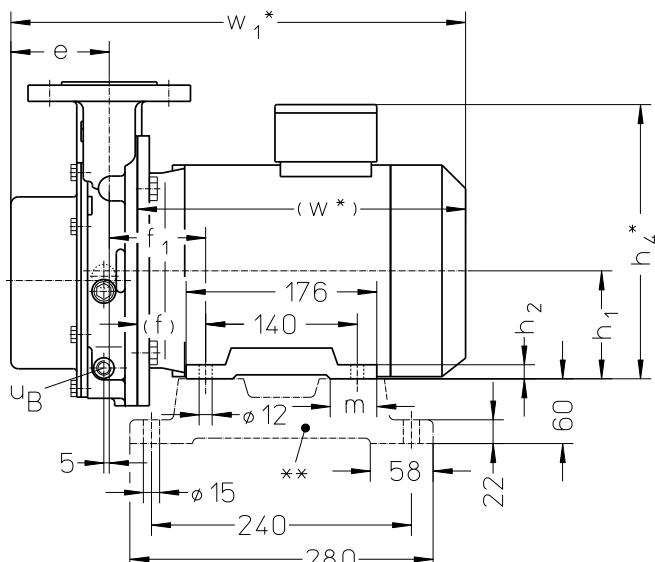

Pressure of gas to be evacuated: 1013 mbar (atmospheric pressure)

The suction volume is related to the suction pressure.

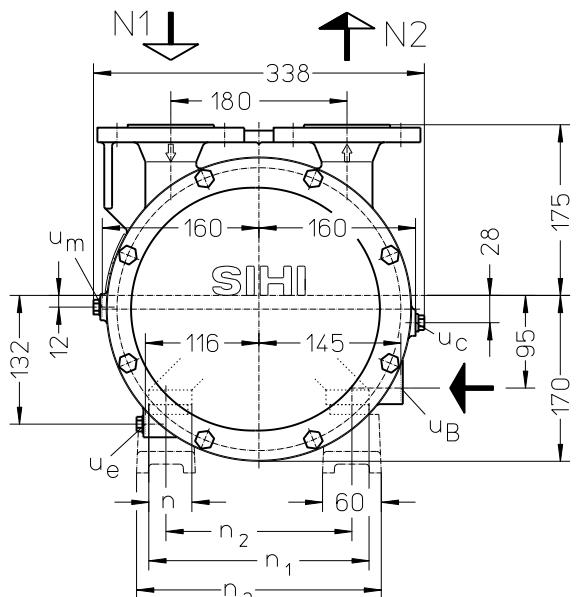

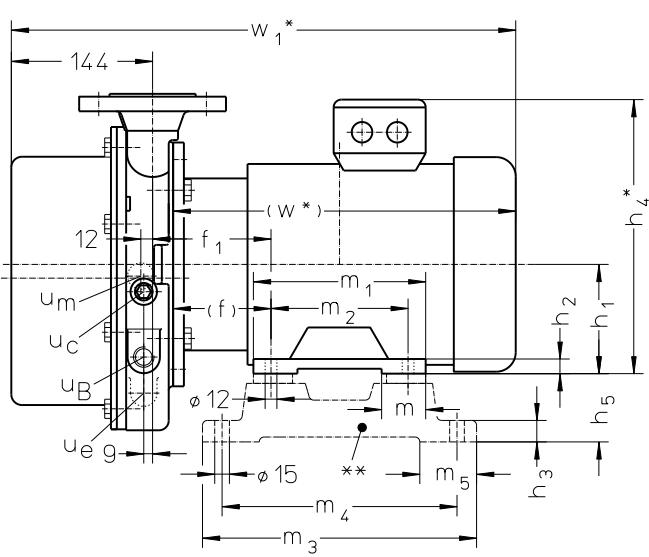

Tolerance on operating data is 10%.

The maximum consumption of make-up water occurs at the lowest suction pressure.

## Motor selection

For our products we offer a lot of different motor types.  
To identify the right motor please specify frequency, voltage and protection class.

### Example for ordering LEM:

LEM 126 CZ B3N 0K 7 **with** 3.0 kW AC motor 50 Hz, 230 VΔ, IP55

### Example for ordering LEL:

LEL 161 9B B3N 0K 7 **for** 4.0 kW AC motor 50 Hz, 230 VΔ, IP55 (motor size 112) has the complete designation:

LEL 161 9B B3N 0K 7 **FS**
