

Liquid ring vacuum pumps

in compact design

SIHI® Pumps

LEM 91, LEM 126, LEM 161 LEL 91, LEL 126, LEL 161 with threaded connection

Pressure range: 33 to 1013 mbar
Suction volume flow: 24 to 195 m³/h

CONSTRUCTION

SIHI liquid ring vacuum pumps are displacement pumps of uncomplicated and robust construction with the following particular features:

- non-polluting due to nearly isothermal compression
- oil-free, as no lubrication in the working chamber
- handling of nearly all gases and vapours
- small quantities of entrained liquid can be handled
- easy maintenance and reliable operation
- low noise and nearly free from vibration
- wide choice of material, therefore applicable nearly everywhere
- protection against cavitation as standard
- incorporated dirt drain
- incorporated central drain
- no metallic contact of the rotating parts

The SIHI liquid ring vacuum pumps LEM/LEL are single-stage ones.

APPLICATION

Handling and exhausting of dry and humid gases; entrained liquid can be handled during normal duty. The pumps are applied in all fields where a pressure of 33 to 900 mbar must be created by robust vacuum pumps.

NOTE

During operation the pump must continuously be supplied with service liquid, normally water, in order to eliminate the heat resulting from the gas compression and to replenish the liquid ring, because part of the liquid is leaving the pump together with the gas. This liquid can be separated from the gas in a liquid separator (see catalogue part accessories).

It is possible to reuse the service liquid. The pumps are equipped with a device by which the contaminated service liquid can continuously be drained during operation (dirt drain), if necessary.

The direction of rotation is clockwise, when looking from the drive on the pump.

GENERAL TECHNICAL DATA

Pump type	unit	LEM 91 LEL 91	LEM 126 LEL 126	LEM 161 LEL 161	
Speed	50 Hz 60 Hz	rpm rpm	2900 3500	1450 1750	
Maximum overpressure on compression	bar	LEM 0.3 / LEL 0.5			
Permissible pressure difference between suction and discharge side	max. min.	bar	LEM 1.1 / LEL 1.3 0.2		
Hydraulic test pressure (overpressure)	bar	3			
Moment of inertia of rotating parts of pump and water content	kg · m ²	0.007	0.009	0.070	
Noise level at 80 mbar suction pressure	dB (A)	72 (67)*		65	
Maximum gas temperature	dry saturated	°C °C	200 100		
Service liquid		°C	80 10 4		
Maximum permissible temperature		mm ² /s	1200		
Minimum permissible temperature		kg/m ³	0.6		
Maximum viscosity		litre	2.0		
Maximum density					
Liquid capacity up to middle of shaft					
Maximum flow resistance of the heat exchanger	bar	0.2			

The combination of several limiting values is not admissible.

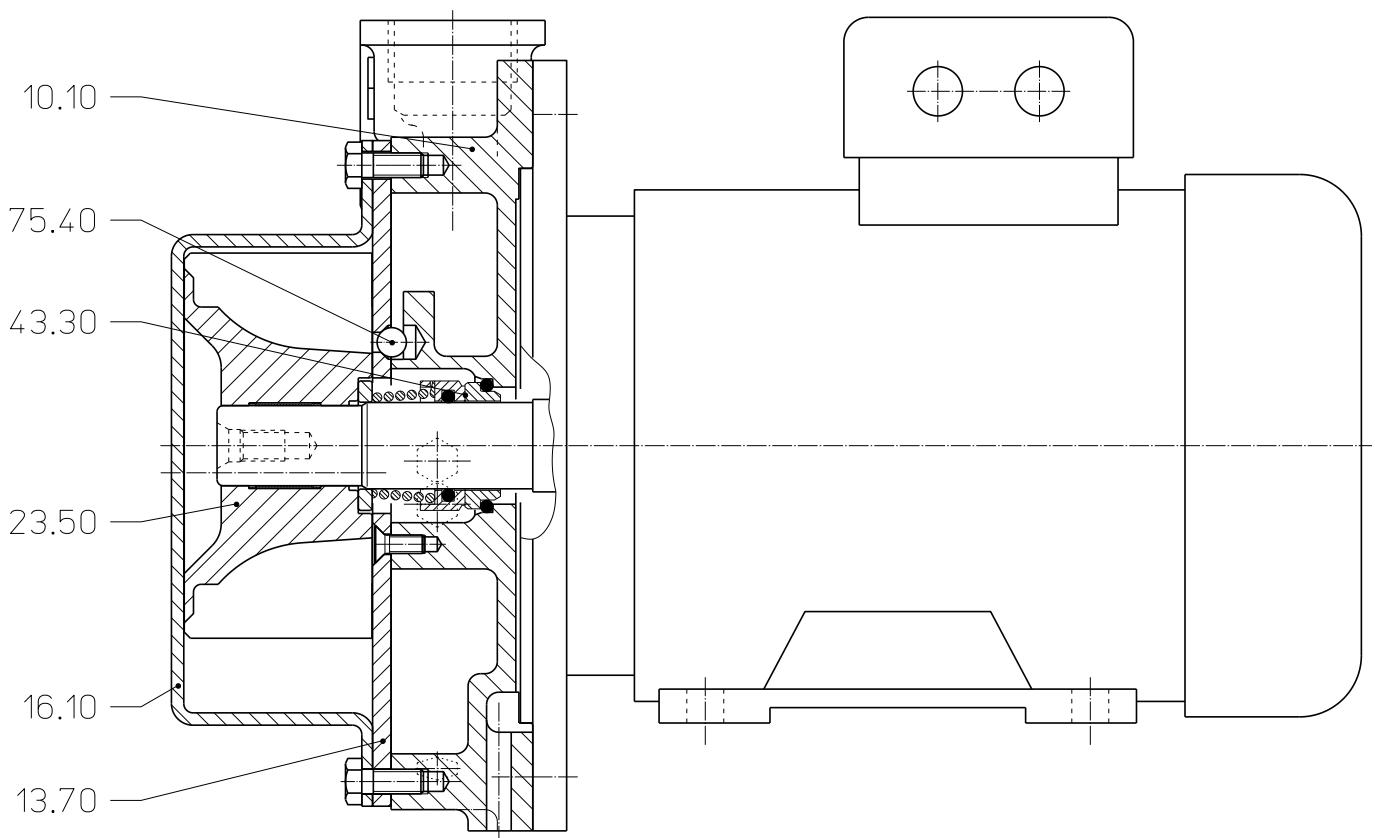

* Value in parenthesis for measuring with sound insulation cup

FB = total service liquid flow rate on once-through system

KB = flow of make-up water when combined with partial recirculation liquid at a temperature of 10 °C, 5 °C, 2 °C, warmer than make-up water

Performance Characteristics LEM 91 / LEL 91

The operating data is valid under the following conditions:

- process media:
 - dry air: 20°C _____
 - steam saturated air: 20°C _____
- service liquid:
 - water: 15°C

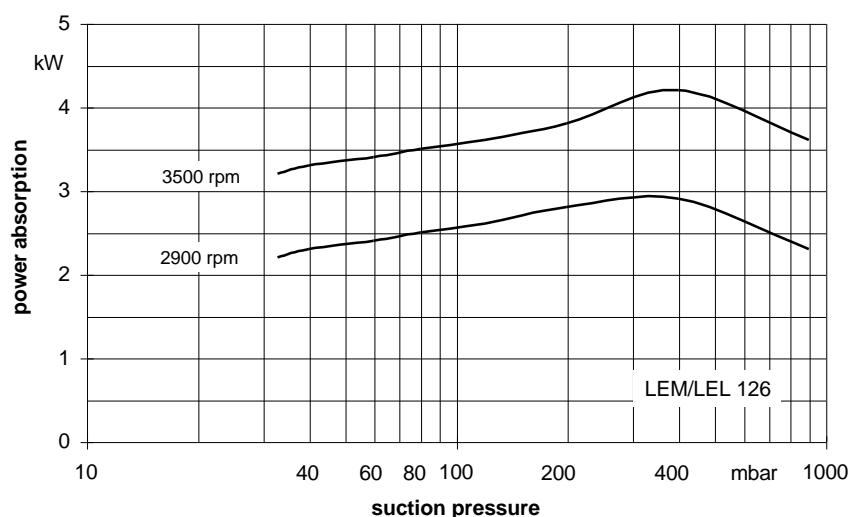

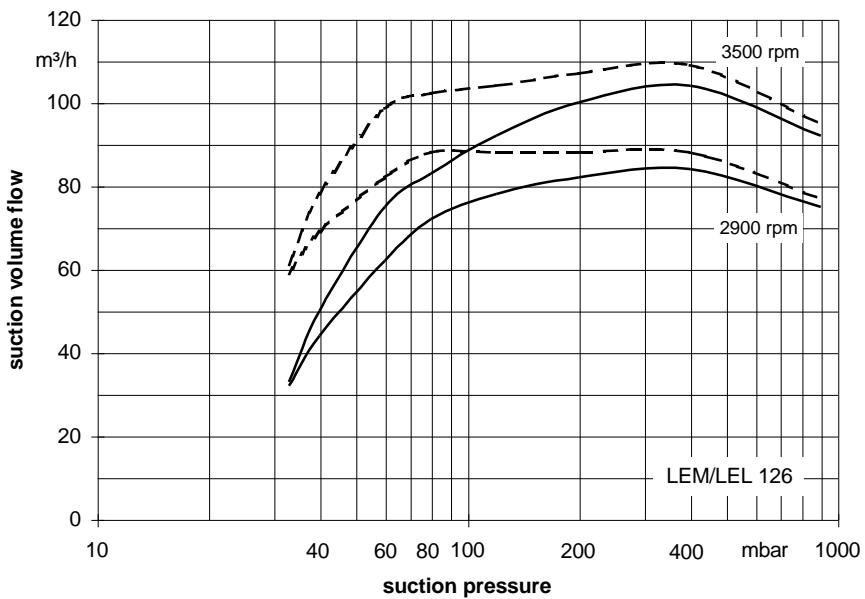

Pressure of gas to be evacuated: 1013 mbar (atmospheric pressure)

The suction volume is related to the suction pressure.

Tolerance on operating data is 10%.

The maximum consumption of make-up water occurs at the lowest suction pressure.

Performance Characteristics LEM 126 / LEL 126

The operating data is valid under the following conditions:

- process media:

- dry air:	20°C	_____
- steam saturated air:	20°C	-----
- service liquid:

- water:	15°C	
----------	------	--

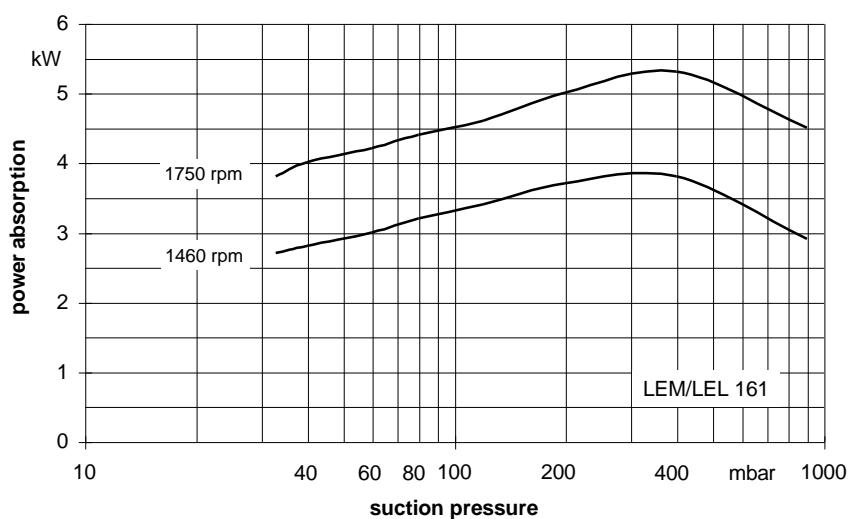

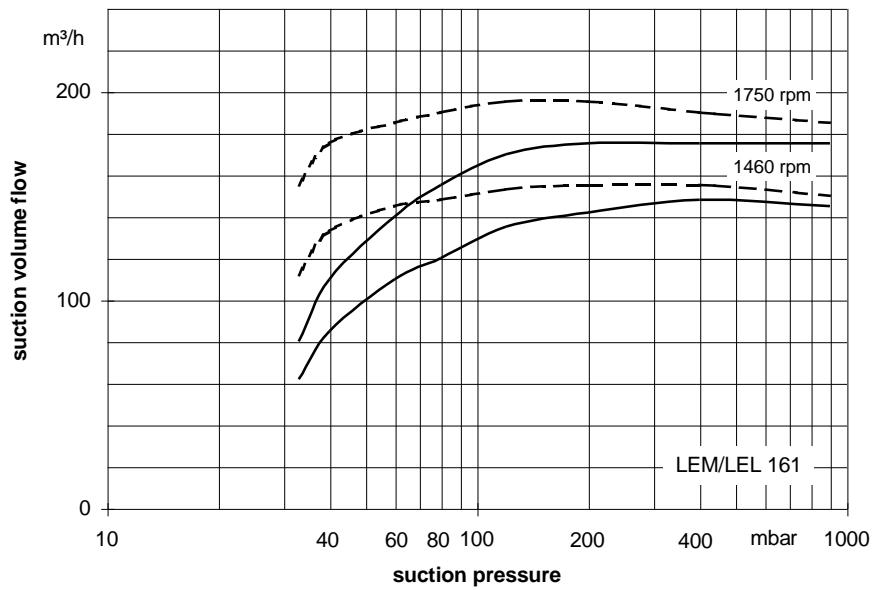

Pressure of gas to be evacuated: 1013 mbar (atmospheric pressure)

The suction volume is related to the suction pressure.

Tolerance on operating data is 10%.

The maximum consumption of make-up water occurs at the lowest suction pressure.

Performance Characteristics LEM 161 / LEL 161

The operating data is valid under the following conditions:

- process media:
 - dry air: 20°C
 - steam saturated air: 20°C
- service liquid:
 - water: 15°C

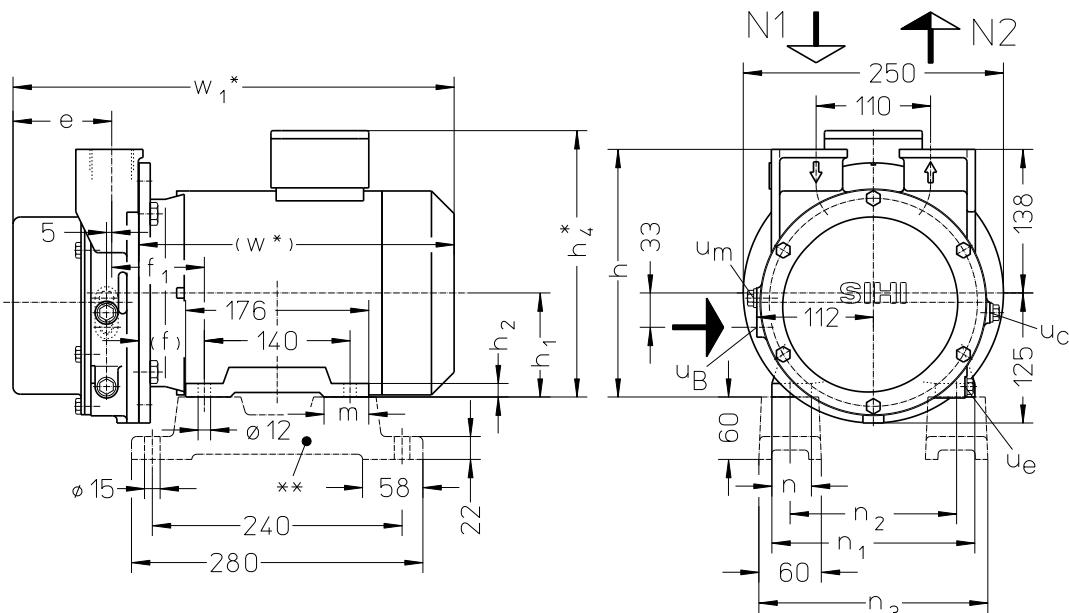

Pressure of gas to be evacuated: 1013 mbar (atmospheric pressure)

The suction volume is related to the suction pressure.

Tolerance on operating data is 10%.

The maximum consumption of make-up water occurs at the lowest suction pressure.

Motor selection

For our products we offer a lot of different motor types.
To identify the right motor please specify frequency, voltage and protection class.

Example for ordering LEM:

LEM 126 AZ AAE 0K 0 **with** 3.0 kW AC motor 50 Hz, 230 VΔ, IP55

Example for ordering LEL:

LEL 161 8B AAE 0K 0 **for** 4.0 kW AC motor 50 Hz, 230 VΔ, IP55 (motor size 112) has the complete designation:

LEL 161 8B AAE 0K 0 **FS**
