Liquid ring compressors

LPH 70123, LPH 70530, LPH 70540

Compression pressure: 0,2 to 1,5 bar Suction volume flow: 550 to 1850 m³/h

CONSTRUCTION TYPE

Sterling SIHI liquid ring compressors are displacement compressors of simple and robust construction. They have the following important features:

Handling of nearly all gases and vapours non-polluting due to nearly isothermal compression oil-free, as no lubrication in the working chamber additional liquid can be handled with the gas flow easy in maintenance and reliable operation low noise and nearly free of vibrations wide choice of material, therefore applicable nearly everywhere incorporated central drain no metallic contact of the rotating parts

SIHI liquid ring compressors LPH 70530 and LPH 70540 are single-stage compressors. They can be applied without modification as vacuum pump up to a suction pressure of 120 mbar (see catalogue part LI 5).

Handling and compressing of dry and humid gases; entrained liquid can be handled during normal duty. The compressors are applied in all fields where a compression over pressure of up to 1,5 bar has to be created by robust compressors and only a small increase in temperature is admissible during compression.

Fields of application are e.g.:

- the plastics industry, for the recovery of process gases as vinyl chloride
- the petrochemical industry, for the compression of combustible gases as gasoline vapours or hydrogen
- transport of gases in general, e.g. to a reactor

NOTE

During operation the compressor must continuously be supplied with service liquid, normally water, in order to eliminate the heat resulting from the gas compression and in order to replenish the liquid ring, because part of the liquid is leaving the compressor together with the gas. This liquid can be separated from the gas in a pressure liquid separator (see catalogue part accessories).

It is possible to reuse the service liquid. The compressors are equipped with a device by which the contaminated service liquid can continuously be drained during operation, if necessary.

The direction of rotation is clockwise, when looking from the drive on the pump.

GENERAL TECHNICAL DATA

Pump type		unit	LPH 70123	LPH 70530	LPH 70540		
Speed	50 Hz 60 Hz	rpm	975 1175	975 1175	975 1175		
Max. compression over pressure		bar		1,5			
Hydraulic test (over pressure)		bar		3			
Moment of inertial of the rotating pump parts and the water filling		kg · m²	1,36	1,36			
Sound pressure level of measuring area		dB (A)	81 82	81 82	81 82		
Min. pulley diameter permissible in case of V-belt drive		mm	315 355				
Max. gas temperature	dry saturated	°C		200 100	'		
Service liquid max. admissible temperature max. viscosity max. density		°C mm²/s kg/m³		80 90 1200			
volume up to shaft level		liter	32	35	38		

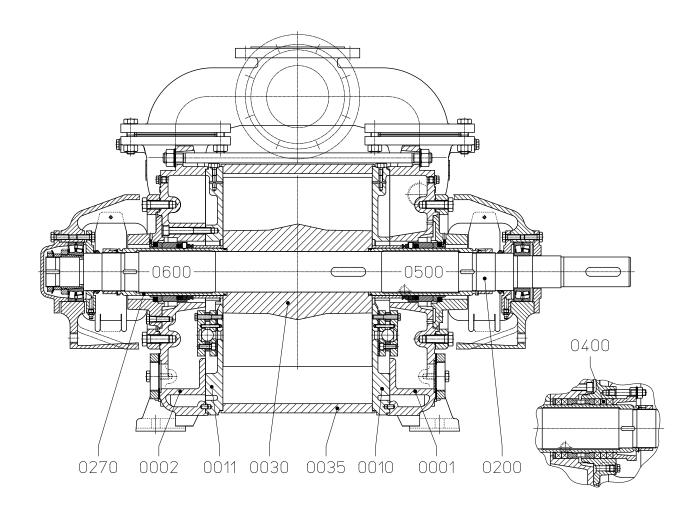

The combination of several limiting values is not admissible.

Sectional drawing LPH 70123, LPH 70530, LPH 70540

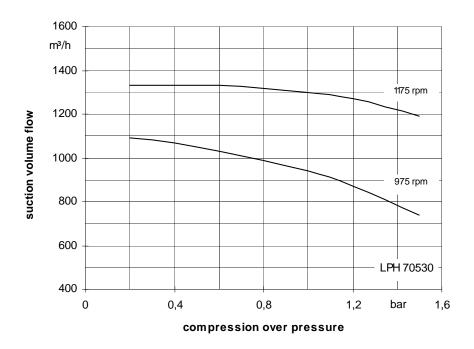

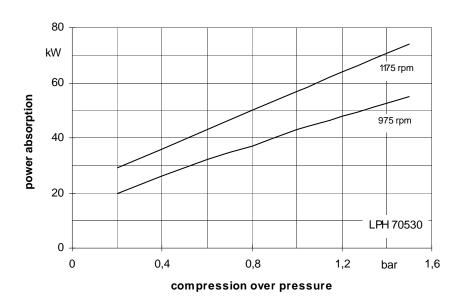

The values indicated for volume flow and power absorption are valid for compression of dry air at 20°C from atmospheric pressure (1013 mbar) to the respective compression pressure with water at 20°C as service liquid. Tolerance of the curve values is 10 %. The compression pressure in bar is indicated as pressure above the atmospheric pressure.

The data indicated change with deviating service conditions, such as deviating physical data of the gas to be handled or of the service liquid (vapour pressure, temperature, density, viscosity) when handling entrained liquid, at a suction pressure deviating from atmospheric pressure, when handling gas-vapours mixtures.

For determination of service data for deviating service conditions please see catalogue section TH.
